PROFESSIONAL PROFILE

- 2 years of continuous learning in computer programming and the software development process. .Seeking to make meaningful contributions in my future roles leveraging my technical knowledge and ability to collaborate in team environments.

PROJECTS

Java Student Registration Software System:

- Implemented the Proxy design pattern to control access to registration functionality, ensuring verification of student GPA eligibility before registration.
- Utilized the Factory design pattern to encapsulate the creation of student and course objects, enhancing code modularity and reusability.
- Utilize Microsoft Teams, Docs and Excel for the collaboration of data dictionary and use cases documentation
- Grasp pros and cons of Agile, Waterfall, and iterative Software Development Life Cycle Methods.

Enhanced Error Handling and Data Integrity in PL/SQL for Accounting System

- Implemented error checking and exception handling functionalities while utilizing the systems ERD to ensure the program's robustness and reliability.
- Thoroughly tested the coded solution using provided datasets and additional test data to ensure its functionality and accuracy.
- Collaborative decision making to design conceptual and physical models implementing up to third normal form techniques

Website Developer, 3D General Services Ltd January 2024

- Collaborate with small business to understand and market their renovation services
- Utilize Figma to create initial layout following design principles
- Use Next.js and Tailwind CSS to fast track development
- Implement server-side rendering for SEO optimization

VOLUNTEERING

Content Researcher , Activism Through Art & Technology, December 2023 - present

- Curate educational content on air pollution and climate change, focusing on their environmental, societal, and economic impacts.
- Work closely with the UX/UI Design Team to incorporate content into interactive web app and installation displays
